ProBerry-Amla®

In the Indian Ayurvedic tradition, Amla (Amalaki) is considered to be a “Rasayana” botanical, something which supports the overall optimal functioning of the body, similar to an adaptogen.* Rasayanas positively support many systems in the body and are able to provide benefit regardless of age or state of health.*

The berries used in ProBerry-Amla® have been eaten, and studied, for thousands of years in traditional cultures throughout the world, including India, Tibet, China, the Americas, Europe, and Africa. They variously contain a diverse range of micronutrients and phytochemicals, including anthocyanins, quercetin, ellagic acid, ellagitannin, punicalagin, oligomeric proanthocyanidins (OPCs), vitamin C, beta-carotene, and zeaxanthin, as well as other vitamins, minerals, and nutrient compounds.* The naturally occurring polyphenols and bioflavonoid pigments are known to have powerful antioxidant activity.*

*Now Available
in Stickpacks!*
